A favorite of farriers, **Dyna Hoof** is designed to be added to the Basic Program for horses with severe hoof problems including, but not limited to, quarter cracks, founder, abscesses, etc.

A horse is only as good as its feet; hooves in poor condition indicate an imbalance in health. Poor hooves can result from overuse of chemical wormers [BASICS: PARASITES], poor digestion [**DynaPro**, BASICS: DIGESTION, BASICS: TEETH], lack of exercise [BASICS: LODGING], poor trimming and/or shoeing [BASICS: HOOVES], toxic soils/forage [BASICS: FORAGE & HAY] and even negative electro-magnetic energies such as proximity to power lines or transformers.

It is common for most horses who abscess, unless it is due to pressure from poor trimming/shoeing, are simply trying to detoxify through their hooves; in other words, there is reason for it.

While most hoof supplements consist only of biotin, **Dyna Hoof** contains biotin plus sulfur and amino acid chelates of zinc, magnesium, iron, copper, manganese all of which are important for hoof health.

We believe the real key to **Dyna Hoof** is the targeted zinc which is the mineral most lacking in unhealthy hoof tissue. Be sure you follow the Basic Program first for 2-3 months (it takes 120 days for the blood to change over) before you try **Dyna Hoof** - you may not need it.

We only recommend starting with **DynaHoof** along with the Basics if there are severe hoof problems requiring fast hoof growth; otherwise the Basics alone seem to provide for excellent hoof health.

Many users report that on the Basics alone, hooves visually improve very rapidly, but with the added **DynaHoof**, hoof growth can actually be measured weekly.

If you do need to feed **Dyna Hoof**, usually one or

two containers, each of which lasts about 45 days, is all you will need to “jump start” the feet. Some horses with thin or “shelley” walls, may need a small daily maintenance dose of perhaps 1/3 ounce.

Dyna Hoof is great for foundered horses, to assist in growing out the abnormal tissue more quickly, and for targeting nutrients to the hoof.

We ourselves have never had a horse require **Dyna Hoof**, but we have seen it work absolute wonders in horses who have needed it. Our horses, who have been on the **DYNAMITE**® Basic Program since 1993, have incredibly strong, pliable hooves (yes, even the white ones!) requiring nothing more than quarterly trimming. From what we hear, we save a great deal of money!

*NOTE: Because **DynaHoof** duplicates some of the minerals in **Super Stress** and **Pre Race Pac**, do not feed these products while feeding **DynaHoof**.*
