DYNAMITE® DOES Make a Difference

SILVIA, LUCY, SOPHIE & BUFFY: DYNAMITE® CHICKS!

In April, 2004, the local feed store had an abundance of chicks which were not selling. Since they were giving them away, I brought some home. They were very weak, could not stand up for long periods of time and were not eating well. I attributed this to crowded conditions and to the fact that they were probably dehydrated because they couldn't get to the water.

I made a weak concoction of Dyna-Pro™ and Dyna-Spark™ (2-3 drops each) in 1 cup water; they eagerly drank the water from the dropper. I did this every hour for 5 hours until it was my bedtime. In the morning, I couldn't believe it - they were all running around pecking, eating and drinking. They were on their own! This was quite a revelation for me because I was going into this with a rather bad thought pattern as I have never had any luck with helping things so small - especially birds!

I feed my chickens the Pelleted Grain Ration (PGR) and Excel™ which I have for my horses plus Exotic Bird Formula™. When they were chicks, I ground the PGR in a coffee grinder, but now they just receive it straight with the powders sprinkled on top. Because chickens are susceptible to a lot of respiratory infections, now and then I add some horse Hiscorbodyne®. And of course, they continue to receive 3-4 drops of Dyna-Pro™ daily in their water.

A FULLY RECOVERED TAZ, THANKS TO DYNA-SPARK™ FOR DOGS

My American Bulldog puppy, Rocky Mountain Tazamar (Taz for short) became very ill one weekend while I was away. I returned to find him refusing to drink fluids.

I gave him Dyna-Spark™ for Dogs, and he began drinking water almost immediately. That electrolyte powder really works GREAT! WOW!!
