

The Best Dog Food in the World Just Got Better!

DYNAMITE® *Super Premium Diet for Dogs is now CORN FREE!*

Due to Popular Demand

DYNAMITE® has improved it's formulation of dog food and is now corn free!

Only the Purest Ingredients

We use only the purest, highest quality ingredients and have now included dried carrots, potato, kelp, apples, celery, beets, parsley, lettuce, watercress, & spinach to create the perfect blend of essential dietary needs for your dog. Each ingredient is carefully selected and balanced to ensure efficiency of digestion and nutrient intake. Every batch of Super Premium Diet for Dogs undergoes 50 different quality control checks so that you can be sure that only the purest and freshest ingredients are used...free of pesticides, preservatives, hormones, mycotoxins and harmful chemicals of any kind.

Aflatoxin & Mycotoxin Testing

Currently, there is no requirement for testing aflatoxin levels in animal foods. However, DYNAMITE® takes every precaution to avoid these harmful by-products. Every batch of DYNAMITE® Super Premium Diet for Dogs is tested for aflatoxin and mycotoxins (harmful fungi that results from improper storage of grains & legume's and are known to cause allergic reactions, organ damage and cancer.) Unlike other manufacturers, we guarantee that your dog's food is safe from these agents.

Added Probiotics

We add all-natural probiotics (*Lactobacillus Acidophilus*, *Lactobacillus Casei*, *Bifidobacterium Thermophilum*, *Enterococcus Faecium*) to aid in the efficiency & maintenance of your dog's digestive system. But even more importantly, we have added a 3 stage slow cooking method that is unique to the pet food industry. We are one of the only companies to add our probiotic after the third and final cooking stage and after the kibble has been cooled to ensure the life and activity of the probiotic enzymes.

Mannan Oligosaccharides

The addition of Mannan Oligosaccharides (MOS) to dog food is revolutionary! DYNAMITE® is the first company to include MOS, a type of protein complex derived from the cell walls of yeast. MOS protects the animal from harmful colonization of pathogens without depleting the natural gut flora that your dog needs for survival. They are a natural alternative to the use of antibiotics, and they won't damage your dog's natural internal balance.
