

A Really Happy Veterinarian!

Submitted by DYNAMITE® Distributor, Courtney Diehl, D.V.M., CO

“The Humane Society is very excited about the DYNAMITE® products after witnessing what the **Trace Minerals Concentrate** did on bleeding wounds - I use them at the shelter when I neuter kittens, when we notch ears on feral cats, and general dogfight bites and scratches.

“The shelter would like a bottle to keep on hand! I also used the **Wound Balm** for ear mites, jugular thrombosis, old healing abscess in knees and other lumps and bumps. We currently have some neonates (kittens) on the bottle and I would like to try some of the **Dyna-Pro™** and **Dyna Spark™** with them - they had a really rough start and we lost two.

“I am using the **Tea Tree Oil** on a scalp psoriasis. So far so good - less itching and shortened healing time. Have also tried it on some scrapes and cuts, nasty bug bites and saddle sores.

“I cannot keep the **Wound Balm** in stock!!! It goes beautifully with my chiropractic care. I used it on a show QH who managed to get a large stab in his hamstring muscle and the scar it left was unbelievable and the horse could not flex or extend the leg properly. With massage therapy and **Wound Balm** on the ugly puffy protruding scar, in 2 weeks it is virtually gone. The owner can't believe it.”

West Nile Vaccine Reaction...

Submitted by Sharon Bringleston, DYNAMITE® Customer

“My 20 year old thoroughbred, Rasta, came to Tarryall Farms a year ago last November after having a negative reaction to West Nile vaccinations that he received in August and September automatically at his previous boarding facility. He was quite weak in the hind end, could not carry my weight without wobbling, and exhibited a new sensitivity to being brushed. Following the West Nile reaction, CSU diagnosed him with a Class II lameness in the right hip but disallowed his neurological vaccine reactions--they had administered the shots. He also was needing to heal from a severe soft

tissue tear in his left hip and an old hip injury of unknown origin (he had been raced and jumped prior to my purchasing him). The muscles in his back and hips were severely knotted and tense and he had to be pushed to work and to extend his hind legs. I felt that the DYNAMITE® nutritional support, as John and Rowan described it to me, and a good rest with light exercise was really critical for his recovery.

“We have had him on the DYNAMITE® program (**Free Choice Minerals**, 4 cups **Pelleted Grain Ration** and 1 oz. **DYNAMITE®**) since his arrival, switching from the Regular **DYNAMITE®** to the **TNT™** about nine months ago. His winter coat came in completely black this year with no brown tinges. I have had him on a program of light, free exercise, in addition to his at-free movement in his very large run, in order to see his energy level and willingness and ability to move. I also have been backing him about 10 steps whenever I am at the stable and doing a program of stretching and massage plus he has been receiving periodic chiropractic care. On Christmas day he gifted me by taking off in a run the minute I turned him loose and running and snorting and rearing and bucking for a good 10 minutes. He was able to flag his tail for the very first time ever. I think his back muscles had been too tense for that expression of spirit. His rear leg action was incredible. He has continued to move this way on his own.

“I am profoundly grateful to see his wonderful spirit being able to express itself in what he loves to do--run and run and run. I have also noticed that he is more relaxed and less jumpy, while at the same time being very alert and present. I am deeply grateful for the DYNAMITE® approach and for the supportive atmosphere at Tarryall Farms. “

ADDENDUM

While fighting and flirting with a mare stabled next to him, Rasta caught his leg in the stock fence and scraped his rear leg badly--especially the inside and front of his hock. When I found him he was pacing and very distressed from pain and trauma. I sprayed his whole leg and hip with **Release™** and saw him immediately relax and allow me to treat the seven scraped areas with **Wound Salve**. John fed him extra **MSM** and **Hiscorebadyne®** for internal support. One week later, the swelling is gone and all the areas except the deepest one have new skin intact. It looks like he will return to normal movement very soon. We are treating the new skin with **Wound Balm**.
