Water is the universal solvent constantly dissolving things and serving as a neutralizer to both acids and alkalis. Because of this, we are able to utilize it for the enrichment of living organisms. A *catalyst* causes action yet remains unchanged. Put those together and you have **DYNAMITE® Catalyst Water**: water that has been enhanced to make it more reactive and a better solvent, thus enabling it to increase the rate of nutrient dissolution and assimilation. The surface tension of the water is reduced, effectively making it “wetter.”

The actual *catalyst* used in **Catalyst Water** is a negative ion formulation of a sodium *micelle*. A colloidal chemist would say that a *micelle* is an electrically charged colloidal particle so small that sometimes it cannot be seen under an optical microscope. In particular, the **DYNAMITE® micelle** is so small that it can easily pass through cell membranes thereby allowing the cell to absorb nutrients, carried with the water, more efficiently. In his book Searching For Health, Dr. Robert J. Peshek states that “*The micelle balance is a major key to health. Micelles buffer acid-forming hydrogen ions that are produced in the breakdown of fat going on in the stomach and in the small intestines.*” Therefore, **Catalyst Water** neutralizes excess quantities of acid solutions found in the body and generates greater magnetic forces than regular water.

Unfortunately, most people do not drink enough vital water, period. The general consensus is 1 quart water (NOT coffee, tea, pop, milk, “electrolyte” drinks, etc.) per 50# body weight. In his book, Your Body's Many Cries for Water, Fereydoon Batmanghelidj, MD theorizes that a major contributor to most modern-day chronic “disease” symptoms is simple dehydration. Utilizing **Catalyst Water** for your daily drinking water source can enhance hydration significantly.

We ourselves use this “activated water” as an essential part of our “secret recipe” daily water—we add the activated water to one ounce **Elixir** in 64 oz. water jugs and drink our individual appropriate amount it all day long in lieu of anything else. Since the advent of **DynaSpark**, which Jim Zamzow originally developed for endurance horses, John also adds a tablespoon of that to his **Elixir/Catalyst** water during hot summer days when he seems to sweat gallons of fluid. Other uses include:

- Adding one ounce of the diluted mixture per 10 gallons tank water weekly, takes a murky, dirty, smelly **fish tank** and turns it into a beautiful sparkling healthy environment in no time. Jos & Tracy Zamzow went from a monthly water change to about twice a year!
- Add 1 part of your **shampoo** to 9 parts of the water solution for greater cleaning and conditioning. You may be able to

skip conditioner!

- Add 1/3 cup of solution to your **bath water**.
- Put 2 to 3 ounces of solution in the soap container of your **dishwasher** and use a reduced amount of dishwasher soap.
- Cut laundry soap use in half by adding 1 cup of solution to your **washer**.
- Try it in **water troughs** after you clean them to also keep algae down: use 1 pt of undiluted **Catalyst Water** per 50 gallons initially, then add just 4 oz. when tank is half full.
- Water your **house plants** with the solution and watch them thrive.
- In lieu of chemicals, each month add 2 cups solution to your **water bed**; some people also add 2 ounces of **Solace**.
- Increased nutrient assimilation/absorption is especially important for anyone with “iffy” digestion: children, geriatrics, ill, etc.
- Aids hydration in both athletes and in anyone—some have even used the mix as the water for their endurance horses while on the trail
- Some have sprayed it direct in the eye for “pink eye”
- Increases oxygen in hot tubs and so decreases bacterial buildup—many have eliminated chemicals entirely from their hot tubs

One pleased user reported this about hot tub usage: “*I want to tell you about one of your DYNAMITE® products - Catalyst Water. It's a real unsung hero!*”

My mother has respiratory problems. She had always enjoyed a nightly dip in her hot tub up until a year ago when the fumes from the chemicals used to balance the hot tub became too irritating to her lungs & skin. At one of our area meetings we were discussing the many uses for Catalyst Water. Of interest was it's use to balance hot tubs without any chemicals! Mom emptied, cleaned & refilled her hot tub, then skeptically added 2 C of the diluted solution of Catalyst Water. She tested the pH balance of the tub expecting that some chemicals would need to be added. To her surprise it was in perfect balance.

For about 6 months now she has been using Catalyst Water to balance her tub and has never had to use any chemicals. She adds 1 C of the dilution about every week. My mom figures that she saves approximately \$15.00 per month using the Catalyst Water instead of chemicals. One of her friends was complaining about how her hot tub dries out her skin. Mom sent her home with a gallon of her 'amazing' stuff. Both of these ladies are back to enjoying their hot tubs, thanks to DYNAMITE®!”

CATALYST WATER IS JUST ANOTHER one of those many “couldn’t-live-without” products from **DYNAMITE!** ■
